

STONE P

PROFESSIONAL antidirt, ecological, *specific for light porous or honed, brushed surfaces.*

Antidirt finish for matt, honed, semi-polished, brushed, naturally split surfaces, sandstone and limestone. Also suitable for some porous ceramics. Covers the superficial stone pores and makes the cleaning easier, without creating a visible plastic coat. Does not change the original aspect of the surface but sometimes a light satin effect may be visible in backlight. Does not turn yellow, nor peel. To be used after an antistain sealer. Especially indicated for floors and stairs but excellent wherever the protection should be the best. Finish to be applied after the sealers MGT 28, MGT H or MGT 6.

Coverage: Approx. 17-25 m² with 1 liter considering 2 coats. This indication may vary according to the type of material and absorbency.

Strong points

- Water-repellent
- Ecological
- Does not turn yellow
- Does not change the color of the surface
- Food contact certified
- Eco-friendly
- Safe for the user
- Improves the anti-stain sealers applied
- Reversible
- Not film forming
- Breathable
- Makes the cleaning easier
- Solvent free
- Good against dirt
- Limits the absorption of writings and sprays
- Excellent for being used before grouting to ease the final cleaning

Application

Shake before using

Ready to use product; do not dilute. Pour or spray STONE P directly onto the clean and treated surface and spread out with circular motions using suitable mops, cloths, sponges or microfibers. Apply STONE P after minimum 6 hours from the previous antistain sealer (MGT 28, MGT H MGT 6). Depending on the porosity apply 1 or 2 coats at 3-4 hours one from the other. In case of very porous or rough surfaces spray with a low pressure gun and spread out evenly with a cloth, a long hair microfibre or a brush. (See application accessories). Any slight marks or traces can be removed using a cleaning machine with a white pad or with the first routine cleaning of the surface. Allow to dry before walking on the surface. For the ordinary maintenance of the treated surface we recommend the regular use of MGP 24 detergent. The use of cleaning machines may affect the lasting of the finish.

Certifications

Food contact certified product. If you wish to obtain a copy of the certification write to: info@mpreatment.com

Resistance

Lab tests show that STONE P applied onto porous and absorbing surfaces makes the cleaning easier, limits degradation, dirt and filling of the porosity. Many materials, albeit of the same type, can have different reactions based on the specific case and their diversity. For this reason, in order to be as precise as possible, it will be our concern, upon request, to carry out specific tests on materials or specific projects.

The best stone care solutions...

Useful information

Since our goal is maximum customer satisfaction, we specify the following. The lasting of a protector on interior surfaces is longer than on exterior surfaces which are more subject to UV rays, temperature excursions and records. We also specify that the fact that a protective is defined as stain resistant does not mean that the surface will never get stained, but that it is possible to obtain the best in terms of results and protection when the substance that has accidentally fallen on the surface is removed as soon as possible. Furthermore, to get the best from surfaces of any kind and material, our suggestion is to choose cleaning products that respect both the surfaces and the treatments and carry out correct maintenance cycles. In this regard, we suggest you download the various guides on the use and maintenance of surfaces to extend the life and maintain the beauty of your surfaces over time from the download area of our site.

Warnings

Before using the product, read the toxicological data sheet (MSDS) and the label detailing all risks and the personal protective equipment to be used for a correct use. The data of this technical data sheet is based on reliable information. Despite of this, not knowing either the materials to be treated nor their conditions, the specific characteristics, the processes and finishes they have undergone, the conditions of the treated materials and the way in which the product will be used, we decline any and all responsibility for damage arising from inadequacy of the product for specific and particular applications.

Therefore, before using the product, carry out a test on an invisible area of the surface and only when sure about the success, proceed on a larger area.

Our responsibility is limited to the cost of the purchased product and therefore we are not liable for damages resulting from negligence or incorrect or different use of the product, from not following these warnings or by other factors that do not depend on

Packaging and storage

Keep the original, sealed container in covered, ventilated, dry environment and keep away from heat or low temperatures. After the use keep the package well closed, so the product has a shelf life of approx. 36 months.

Box of 15 x 1 L bottle. Box of 4 x 5 L cans.

Guarantee

If the customer's request is to have a guarantee on a specific material or project, just send us the request and we will evaluate and, if necessary, adapt the best guarantee to a specific material or specific project, thus also indicating the various conditions that change from situation to situation. We would like to point out that although several products offer generalized guarantees that boast long duration, it is advisable to be wary of generic guarantees that do not consider specific aspects such as: specific materials, conditions and environment where these will be placed and the final use of the environments.
